

What is your field of study? Why did you choose this field to work in?

I have a graduate degree in Physics. I decided on physics because I liked the fact that it was broad and I felt that it would prepare me well for a variety of interesting careers.

Is the engineering/science/technology field different than what you thought it would be?

There's a lot more teamwork involved that I could have imagined. The problems one faces are challenging, but can usually be broken down into manageable pieces and when you're surrounded by intelligent, helpful colleagues, a solution is achievable.
