

What do you do as an engineer/scientist?

I am in the storage architecture group. I work with others to define the strategy for storage products and help with the design of data replication functions.

How do you use your technical training and/or degree today? How has it helped you?

My background in electronics and the courses I took in circuit design help me understand the hardware in our storage products. My main focus has been on storage controller microcode, which requires a knowledge of the hardware and how it interacts with the microcode (or control software).

What do you find most satisfying about your work?

I am learning things all the time – every day is interesting and challenging. Plus I work with a great group of people.
