

What is your field of study? Why did you choose this field to work in?

My field of study is Software Engineering. I choose this field because I'm pretty logical in my thinking, and working on software just fits into that logical realm.

Is the engineering/science/technology field different than what you thought it would be?

It is slightly different in that being innovative or on the cutting edge isn't a day-to-day thing. If you want to learn new technology you have to go beyond your work assignments most of the time.
