

### **III. Thinking about your Career**

1. What do you do as an engineer/scientist?

My role today is Practice Executive for Portals and Content Management –a national practice providing services in systems integration related to Portals and Content Management. My daily role involved people management, technical direction of the practice, staffing and skills development and working with our clients.

2. How do you use your technical training and/or degree today? How has it helped you?

I think the major effect of my studies manifests itself everyday in my ability to take a logical approach in solving problems. This logical approach can be used in a variety of ways – whether it is a technical problem with programming code or whether it is bring around a project that may be underestimated or whether it is to solve a staffing issue.

3. What do you find most satisfying about your work?

The most satisfying or rewarding parts of my job are the people. Since I'm in a services business, our assets are our people. We have an amazing team of talented individuals and seeing them grow and excel every year is the most rewarding part of this job.
