

Workload Manager & Goal Mode Conversion

IBM Global Services

Workload Manager - The Service Offering

The Workload Manager service offering assists you with the migration of your system from Compatibility Mode to Goal Mode, thus enabling you to harness the enhanced manageability features of Workload Manager on the OS/390 platform.

Service Benefits

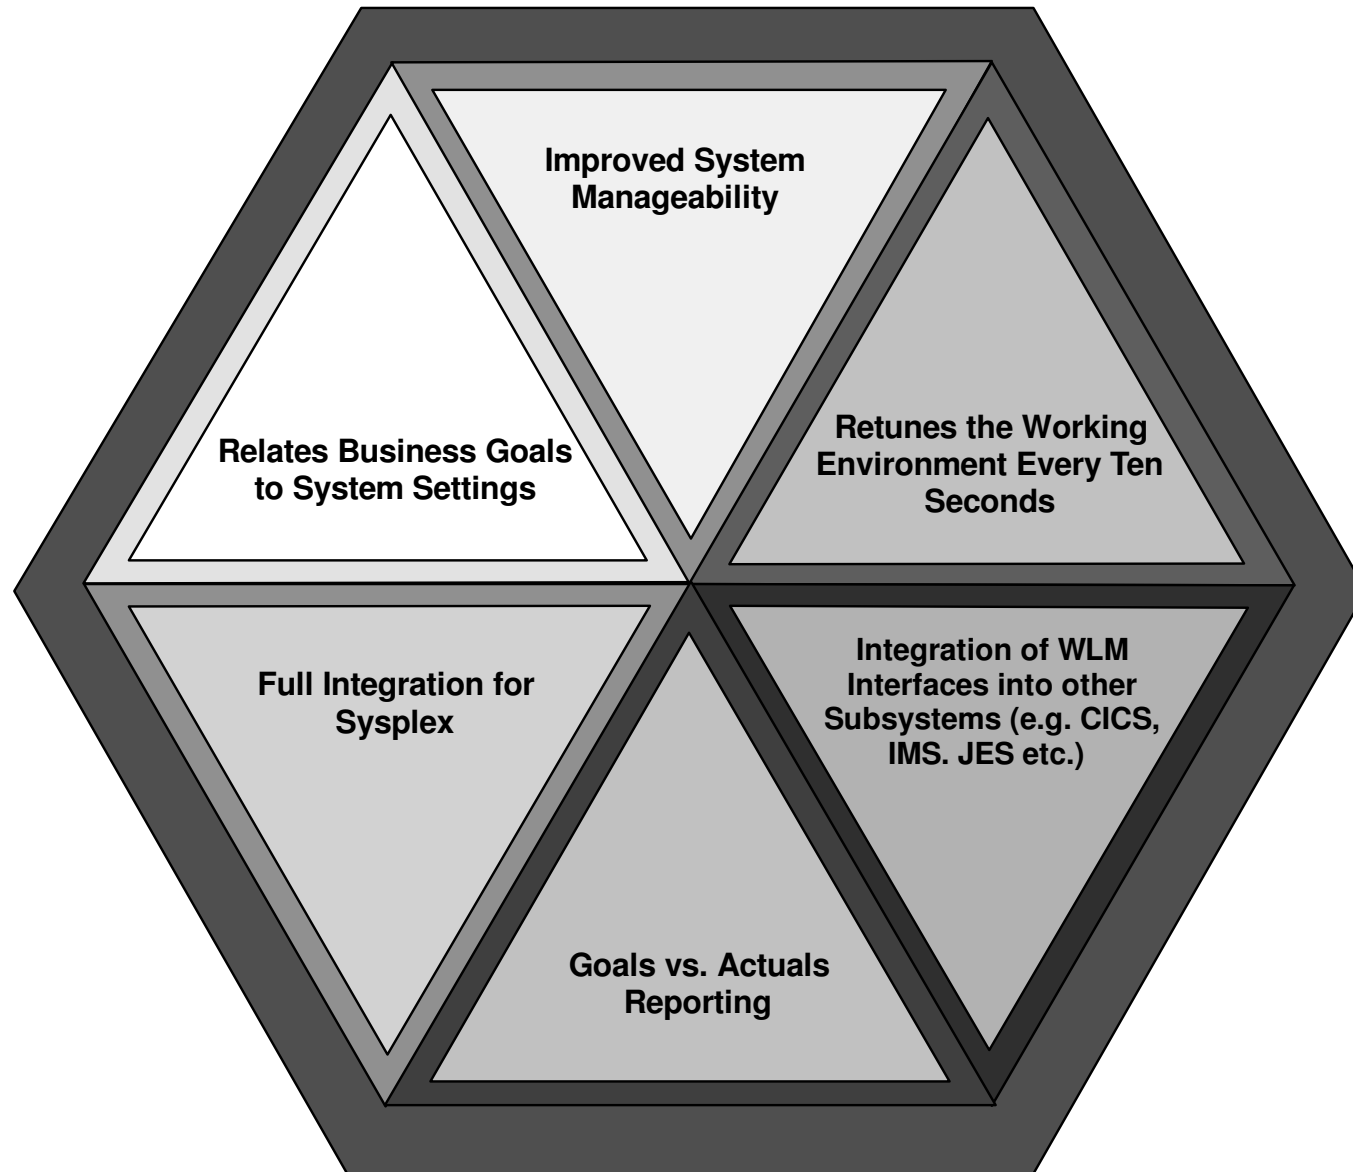

The Workload Manager service frees up your IT resources to focus on business critical projects.

IBM has got a proven track record of successful Workload Manager implementations (e.g. Nationwide)

IBM has got the experience and the resources to reduce a Goal Mode conversion from potentially a three month project to just over one week's effort.

Technical Benefits

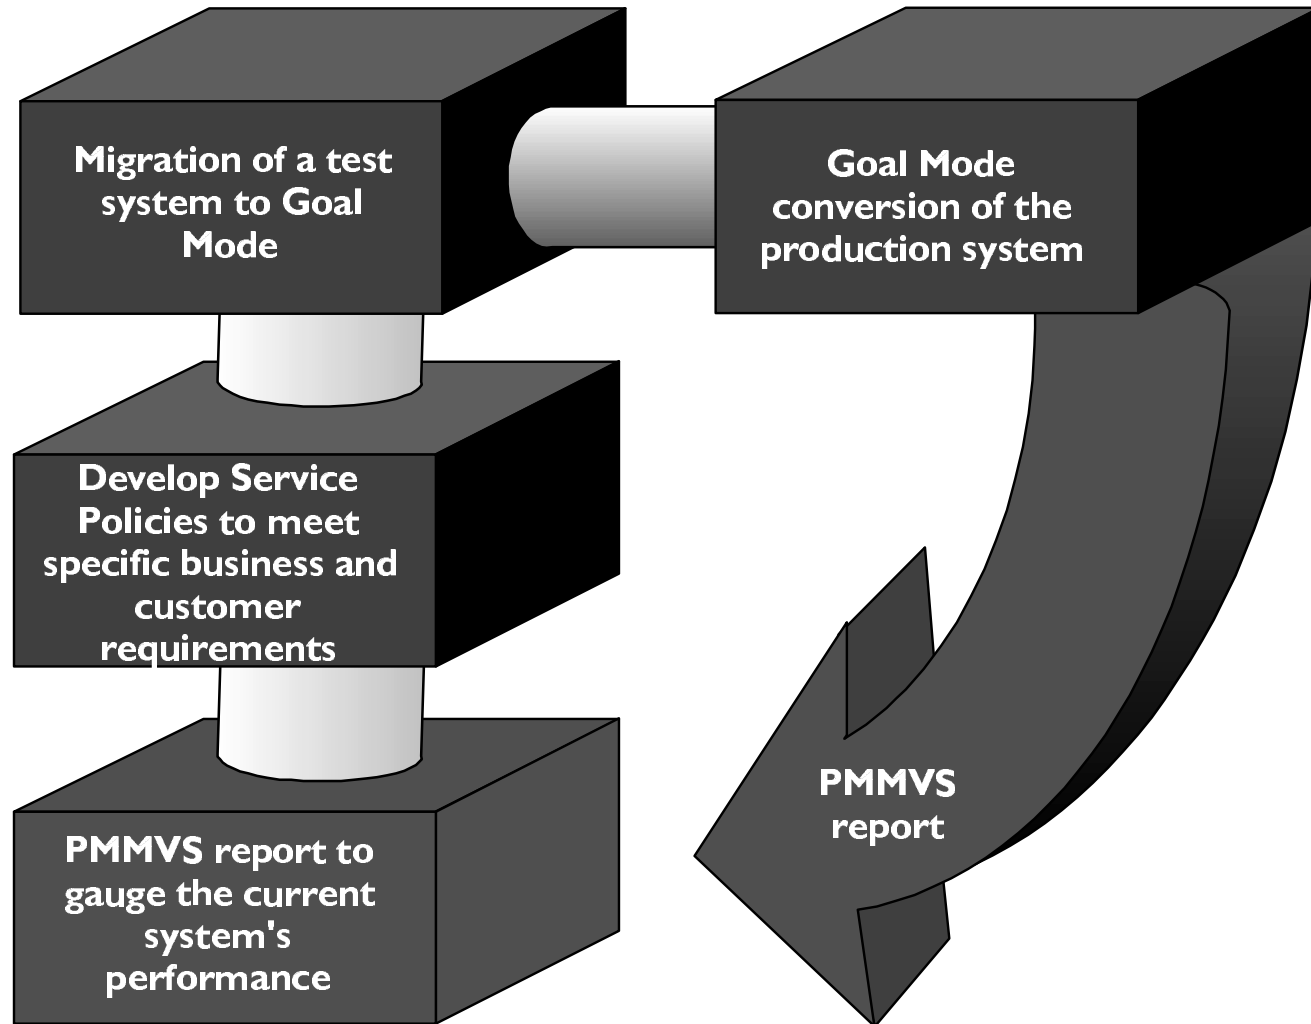

Workload Manager Concepts

- 
- ➔ *Replaces parmlib members IPS, ICS, and most of the OPT with a set of business related goals to proactively manage the performance of the system*
 - ➔ *Performance Groups are replaced by Service Classes*
 - ➔ *ICS is replaced by Classification Rules*
 - ➔ *RMF is enhanced to gather new Goal Mode data*
 - ➔ *The System Resource Manager (SRM) still works in a similar way*

Service Delivery
