IBM Containers Beta

Except as noted below the terms of the IBM Bluemix Service Description or Terms of Use, as applicable, apply.

The following is the Service Description for the Cloud Service:

1. Cloud Service Description

The IBM Containers Beta enables you to run Docker containers in a hosted cloud environment via IBM Bluemix, development workstations or a local data center. Port your existing applications to IBM Bluemix and make them publically accessible by using containers. A private registry is provided where trusted images can be uploaded, stored and retrieved. These terms only apply to IBM Containers and not to the software contents of the container. Any software content included in the image should be vetted to ensure it can be legally built and distributed.
