IBM Watson Tradeoff Analytics

Except as noted below the terms of the IBM Bluemix Service Description or Terms of Use, as applicable, apply.

1. Cloud Service Description

The IBM Watson Tradeoff Analytics Cloud Service helps people optimize their decisions while striking a balance between multiple, often conflicting, objectives. The Cloud Service can be used to help make complex decisions like which laptop to purchase. IBM Watson Tradeoff Analytics uses Pareto filtering techniques to identify the optimal alternatives across multiple criteria. It then uses various analytical and visual approaches to help the decision maker explore the pros and cons of the alternatives.

The Cloud Service can be used for development of applications that may only be used internally within Client’s enterprise.

2. Content, Data, Feedback and Suggestions

2.1 Rights Granted by Client

In order to improve or enhance the Cloud Service, or to develop new services, IBM may use Client’s content and data that Client provides to the Cloud Service.

By using the Cloud Service, Client agrees, and agrees to notify its end users who use Client’s application, that IBM may access, use, copy, distribute internally, and extract, compile, synthesize, analyze and otherwise make derivative works of Client’s and Client’s end user’s content and data to improve or enhance the Cloud Service, or to develop new services. Client and Client’s end users will not be identified in any such enhancements or new services.

Client agrees the content or data and any suggestions or feedback provided will not include confidential information of Client or any other person or entity. IBM may use for any purpose without restriction any feedback and suggestions that Client or its end users provides. Client represents and warrants it will obtain all required authorizations prior to providing the content, data, suggestions and feedback to the Cloud Service.

2.2 Opt Out

Client may at any time request IBM to discontinue use of Client’s content or data by revising the header in a REST API call with the following additional header when submitting Client’s data:

"X-WDC-PL-OPT-OUT: 1"

As an example, if Client’s original request was:

`curl -u <username>:<passwd> -H "Accept: application/json" -d <payload_data> <service_url>`

Client must revise as follows:

If Client revises the header in Client’s REST API call, IBM will then discontinue future use of Client’s content and data associated with that submission.

3. Entitlement and Billing Information

3.1 Charge Metrics

The Cloud Service is offered in accordance with the following charge metric(s):

API Call – An API Call is the invocation of the Cloud Service via a programmable interface. You will be charged for each API Call during the billing period.

4. Safe Harbor Framework

The Cloud Service does not comply with the US-EU and US-Swiss Safe Harbor Frameworks.
