IBM Watson Dialog Service - Beta

This service is in beta. The terms for this service are found in the IBM Bluemix platform Service Description, or Terms of Use, as appropriate and modified by the provisions below.

1. Cloud Service Description
The IBM Watson Dialog service allows a Developer to integrate a natural language interaction between an end user and a given application. Within the Service, the developer can craft their own conversations and chat flows to drive end users to an intended outcome, which could be an answer to a question, or to a specific action dictated by the application.

2. Content, Data, Feedback and Suggestions

2.1 Rights Granted by Client
In order to improve or enhance the Cloud Service, or to develop new services, IBM may use Client’s content and data that Client provides to the Cloud Service.

By using the Cloud Service, Client agrees, and agrees to notify its end users who use Client’s application, that IBM may access, use, copy, distribute internally, and extract, compile, synthesize, analyze and otherwise make derivative works of Client’s and Client’s end user’s content and data to improve or enhance the Cloud Service, or to develop new services. Client and Client’s end users will not be identified in any such enhancements or new services.

Client agrees the content or data and any suggestions or feedback provided will not include confidential information of Client or any other person or entity. IBM may use for any purpose without restriction any feedback and suggestions that Client or its end users provides. Client represents and warrants it will obtain all required authorizations prior to providing the content, data, suggestions and feedback to the Cloud Service.

2.2 Opt Out
Client may at any time request IBM to discontinue use of Client’s content or data by revising the header in a REST API call with the following additional header when submitting Client’s data:

"X-WDC-PL-OPT-OUT: 1"

As an example, if Client’s original request was:
```
curl -u <username>:<passwd> -H "Accept: application/json" -d <payload_data> <service_url>
```
Client must revise as follows:
```
```
If Client revises the header in Client’s REST API call, IBM will then discontinue future use of Client’s content and data associated with that submission.

3. Safe Harbor Framework
The Cloud Service does not comply with the US-EU and US-Swiss Safe Harbor Frameworks.
