

IBM Certified Secure Data Overwrite Service

Protect your organization and clients by cleansing your disk drives

Features

- Service designed for IBM DS8000, ESS 800 or 750 enterprise-class storage systems, IBM XIV® storage systems, or IBM TotalStorage® Virtual Tape Server Models B10 or B20
- Overwrites drives to the US DoD 5220-22-M three-pass standards (additional passes are optionally available).
- Drives are overwritten in parallel using the resources of the storage system, reducing the time required to sanitize the drives.
- Process overwrites drives and portions of drives that are not visible to external servers, yet may still contain traces of data.
- Generates a report certifying by drive serial number the results of the overwrite operations.
- Performed at the client location to avoid the risk of shipping drives containing sensitive data off-site.

Typical Benefits

- Reduces the business and security risk of data getting into the wrong hands.
- Allows units used for storage of sensitive data to be repurposed or safely discontinued.
- Can provide the disposition solution for clients that want to upgrade to new storage technology.
- Can help address regulatory, legal and potential liability issues that demand a certifiable process for storage sanitization.

Why IBM®?

- **Deep skills in information infrastructure hardware and software solutions.**
- **Deep skills in service management and security issues.**
- **Skills, experience, and insight gained through thousands of client engagements spanning the globe and industries.**
