If anything is certain about the future, it’s that there will be more complexity, more data to manage and greater pressure to deliver instantly. To maintain your footprint in tomorrow’s marketplace, it’s critical to keep up with the changes, master the updates and stay ahead of the curve.

At IBM Systems Technical University events, you will learn how to plan, architect, install, configure, migrate, operate and tune your IBM Power Systems and Storage infrastructure for today and tomorrow. Learn how to take advantage of superior core performance and memory bandwidth to handle flexible consumption models and changing customer needs.
