

# IBM Cloud Additional Service Description

---

## IBM Single Sign On for IBM Cloud

Except as noted below, the terms of the IBM Cloud Service Description apply.

### 1. Cloud Service Description

Single Sign On is a policy-based authentication service that provides an embeddable single sign on capability for web applications. The Single Sign On service allows application developers to add policy-based authentication mechanisms without the need to manage application-specific identity repositories or have in-depth knowledge about the security protocols being used. The Single Sign On service supports the use of multiple identity sources.

### 2. Content and Data Protection

The Data Sheet applicable for this service and the terms of this section provides the details and terms, including Client responsibilities, around use of this service. The following Data Sheet(s) apply to this service.

<https://www.ibm.com/software/reports/compatibility/clarity-reports/report/html/softwareReqsForProduct?deliverableId=1413346862111>

### 3. Entitlement and Billing Information

#### 3.1 Charge Metrics

The following charge metric(s) apply to this service:

**Application-User** – An Application is a uniquely named software program that is separately installable on a computing device. For each Application managed by the Cloud Service, Client will be charged for each authenticated user who accesses that Application during the billing period. Multiple authentications by a single User to a single Application count as a single Application-User. A single User authenticating to multiple Applications counts as multiple Application-Users.

Note: Single Sign On does not correlate multiple identities from different identity sources into a single User. Therefore, if a single User accesses an Application using multiple identity sources (e.g., Facebook and on-premise directory), this will be reported as multiple Application-Users.

**Instance** -- An Instance is access to a specific configuration of the Cloud Service. Client will be charged for each Instance of the Cloud Service that exists during each month during the billing period.

#### 3.2 Partial Monthly Charges

Each Application-User is billed on a monthly basis. Partial month usage is not available at this time.

Each Instance is billed on a monthly basis. Partial month deployment/usage will be pro-rated.
