

IBM Business Rules for Bluemix

Except as noted below the terms of the IBM Bluemix Service Description or Terms of Use, as applicable, apply.

1. Cloud Service Description

IBM Business Rules for Bluemix enables developers to minimize code changes by keeping business logic separate from application logic. The service provides the tooling to author business rules and the environment to deploy and execute the rule applications.

2. Entitlement and Billing Information

2.1 Charge Metrics

The Cloud Service is offered in accordance with the following charge metric(s):

Thousand API Calls – An API Call is the invocation of the Cloud Service via a programmatic interface. Client will be charged for the number of API Calls, rounded up to the next Thousand, during the billing period.

The API Calls measured by this Cloud Service are calls made to the rule execution engine to get a decision.

Million Rules Decisions – A Rules Decision is the outcome of invoking a ruleset from a rule execution server. Sufficient entitlements must be obtained to cover the total number of Rules Decisions, rounded up to the nearest Million, executed or processed, during the billing period.

The Rules Decisions measured by this Cloud Service are the calls made to the rule execution server to get a decision.

3. Dedicated

Dedicated deployments of the Cloud Service have an agreed capacity measured by the relevant charge metric. Client agrees to limit the usage of the Cloud Service to that capacity. If Client exceeds that usage limitation, it must purchase additional capacity to cover that usage.

The Business Rules service allocates 16 GB of the Bluemix Dedicated application compute capacity, from which up to ten instances of 1 GB each can be invoked to execute entitled Rules Decisions.

4. Privacy Shield

This Cloud Service is included in IBM's Privacy Shield certification and applies when Client chooses to have the Cloud Service hosted in a data center located in the United States. The IBM Privacy Shield Privacy Policy applies to this offering, and is available here: http://www.ibm.com/privacy/details/us/en/privacy_shield.html.

5. Enabling Software

Enabling software included with the Cloud Service is:

- IBM Rule Designer
